# Lufft WS401-UMB – Temperature, Relative Humidity, Precipitation, Air Pressure

From the WS product family of professional intelligent measurement transducers with digital interface for environmental applications.

Integrated design with ventilated radiation protection for measuring:

- Air temperature
- Relative humidity
- Precipitation
- Air pressure

Relative humidity is measured by means of a capacitive sensor element; a precision NTC measuring element is used to measure air temperature.

Optionally, the WS401-UMB can be equipped with a leaf wetness sensor in addition.

Precipitation is measured by tipping spoon and tipping bucket processes. The flexible tipping bucket allows a 0.2mm or a 0.5mm resolution of the rainfall.

Measurement output can be accessed by the following protocols:  
UMB-Binary, UMB-ASCII, SDI-12,  
MODBUS

**One external temperature sensor is connectable.**

Aspirated temperature/humidity measurement  
Open communication protocol:  
- UMB-ASCII  
- UMB-Binary  
- SDI-12  
- MODBUS  
- Analoge outputs in combination with 8160.UDAC
